CUSTOMER SUPPORT POLICY

Version 1.0

1. PURPOSE

The purpose of this customer support policy is to provide a consistent approach for identifying, prioritizing, resolving, and escalating customer support issues.

2. SUPPORT PRIORITY

Support issues are categorized according to their urgency and customer impact.

LOW PRIORITY

Examples:

- General product questions.
- Requests for documentation.
- Basic feature questions.
- General usage guidance.

Recommended response:

Provide appropriate documentation, instructions, or product guidance.

MEDIUM PRIORITY

Examples:

- Repeated product difficulties.

- Feature configuration problems.
- Problems affecting part of the customer's workflow.

Recommended response:

Investigate the issue and provide a solution or appropriate troubleshooting guidance.

HIGH PRIORITY

Examples:

- Major product functionality problems.
- Repeated unresolved issues.
- Problems significantly affecting customer operations.

Recommended response:

Prioritize investigation and involve appropriate technical or customer success teams.

CRITICAL PRIORITY

Examples:

- Severe product failures.
- Issues affecting critical customer operations.
- Major unresolved problems for high-value customers.

Recommended response:

Escalate immediately to the appropriate team and maintain communication with the customer until the issue is addressed.

3. MULTIPLE SUPPORT TICKETS

A high number of support tickets may indicate customer dissatisfaction.

Customers with repeated tickets should be reviewed for:

- Recurring problems.
- Unresolved issues.
- Poor product understanding.
- Product usability problems.
- Communication problems.

4. UNRESOLVED SUPPORT ISSUES

An unresolved support issue should be investigated before recommending a retention campaign.

Recommended process:

1. Identify the unresolved ticket.
2. Determine the issue category.
3. Review previous responses.
4. Identify the responsible team.
5. Escalate when required.
6. Confirm resolution with the customer.

5. SUPPORT AND CHURN RISK

Support activity can be an important factor in customer churn analysis.

A customer showing:

- Increasing support tickets,

- Low product usage,
- Reduced login frequency,

may require proactive customer-success intervention.

6. CUSTOMER COMMUNICATION

Customer communication should be:

- Clear.
- Professional.
- Helpful.
- Personalized.
- Focused on solving the customer's problem.

Customers should not be contacted repeatedly with unrelated promotional messages when they have unresolved support issues.

7. ESCALATION

Support issues should be escalated when:

- The issue cannot be resolved by the current support team.
- The issue significantly impacts customer operations.
- The customer has repeatedly reported the same issue.
- The issue affects a high-value customer.
- The issue may create significant churn risk.

8. SUPPORT FOLLOW-UP

After resolving an important issue:

- Confirm that the customer can use the product successfully.
- Monitor future support activity.
- Monitor product usage where appropriate.
- Identify whether additional training is required.

9. EXAMPLE

Customer ID: 10245

Support tickets in recent period: 6

Payment failures: 2

Product usage: Low

Recommended approach:

Review the customer's six support tickets to identify recurring or unresolved problems. Resolve critical issues before sending a retention offer. After resolution, monitor customer activity and engagement.

10. SUPPORT SUCCESS METRICS

Support teams can evaluate performance using:

- Average resolution time.
- Number of unresolved tickets.
- Repeat ticket rate.
- Customer satisfaction.
- Escalation rate.
- Support-related churn.
