

CUSTOMERPULSE AI

PRODUCT FEATURES GUIDE

Version 1.0

1. PRODUCT OVERVIEW

CustomerPulse is a customer intelligence platform designed to help organizations understand customer behavior, monitor engagement, identify churn risk, and support customer retention activities.

2. CORE PRODUCT FEATURES

CustomerPulse provides several capabilities for analyzing customer behavior.

CUSTOMER ANALYTICS

Customer analytics allows teams to review:

- Customer profile information.
- Subscription information.
- Product usage.
- Login activity.
- Support interactions.
- Payment activity.

3. CUSTOMER ENGAGEMENT

The engagement module helps teams understand customer activity.

Important engagement indicators include:

- Login frequency.
- Product usage.
- Feature usage.
- Recent activity.
- Usage trends.

4. USAGE ANALYTICS

Usage analytics provides information about how customers use the platform.

Teams can monitor:

- Total usage.
- Recent usage.
- Usage trends.
- Usage decline.
- Usage by customer segment.

5. CUSTOMER RISK

The customer risk module uses customer behavior and other available information to estimate churn probability.

Risk categories include:

LOW

0%–39% predicted churn probability.

MEDIUM

40%–59% predicted churn probability.

HIGH

60%–79% predicted churn probability.

CRITICAL

80%–100% predicted churn probability.

6. CHURN PREDICTION

The churn prediction system evaluates multiple customer characteristics.

Potential signals include:

- Customer tenure.
- Login frequency.
- Product usage.
- Support tickets.
- Payment failures.
- Monthly charges.
- Contract type.
- Subscription type.

7. CUSTOMER RISK EXPLANATION

The platform can provide explanations for predictions.

For example:

Customer churn probability: 82%

Important risk factors:

- Low login frequency.
- Declining product usage.
- Multiple support tickets.
- Payment failures.

8. CUSTOMER SEGMENTS

Customers can be analyzed by:

- Subscription type.
- Contract type.
- Tenure.
- Engagement level.
- Churn risk.
- Customer value.

9. CUSTOMER VALUE

Customer value can be estimated using customer spending and tenure.

Example:

Monthly charges: ₹2,000

Tenure: 12 months

Estimated historical value:

$$₹2,000 \times 12 = ₹24,000$$

10. AI CUSTOMER ANALYST

CustomerPulse includes an AI analyst designed to answer questions about customer behavior and retention.

Example questions include:

- Why is this customer at risk?
- Which customers have the highest churn risk?
- What are the main churn indicators?
- What retention strategy should be used?
- Which customers have payment problems?
- Which customer segment has the highest churn?

11. AI KNOWLEDGE ASSISTANT

The AI assistant can use company knowledge documents to provide recommendations.

Relevant documents may include:

- Retention strategy.
- Customer support policy.
- Subscription policy.
- Product feature documentation.

12. FEATURE RECOMMENDATIONS

Customers with low engagement may benefit from product education and feature recommendations.

Recommendations should consider:

- Customer usage.
- Current subscription.
- Customer requirements.
- Previously used features.

13. PRODUCT SUPPORT

Customers can receive assistance through:

- Product documentation.
- Customer support.
- Feature guidance.
- Troubleshooting instructions.

14. EXAMPLE

Customer ID: 10245

Profile:

Age: 35

Tenure: 5 months

Monthly charges: ₹90

Login frequency: 3 times

Support tickets: 6

Payment failures: 2

Usage hours: 10

Contract: Monthly

Subscription: Basic

Predicted risk:

CRITICAL

Potential reasons:

- Low login frequency.
- Low usage.
- Multiple support tickets.
- Payment failures.

Recommended next step:

Review the customer's support and payment history and provide personalized assistance based on the customer's actual requirements.

15. PRODUCT SUCCESS METRICS

CustomerPulse can help organizations monitor:

- Customer engagement.
- Churn rate.
- Retention rate.
- Customer risk.
- Product usage.
- Support activity.

- Payment issues.

- Customer value.
